---

**QUESTION NO: 1**

Begin by clicking the Exhibit button.

What partition has an incorrect partition boundary?

- A. Partition C
- B. Partition E
- C. Partition D
- D. Partition A
- E. Partition B

**Answer: B**

**QUESTION NO: 2**

What tasks are helpful in completing a needs analysis when designing an eDirectory tree?  
(Choose 2.)

- A. Gather information to estimate the time for each phase of design
- B. Gather information about resources that users access
- C. Gather information to decide which server should be the time provider
- D. Gather information about network connectivity
- E. Gather information to decide on a replica placement strategy

**Answer: B,D**

---

**QUESTION NO: 3**

You are the project lead of your company's eDirectory design and implementation effort. Your company is installing 10 NetWare 5 servers. You are getting ready to design the eDirectory tree. In accordance with the eDirectory design cycle, which tasks should you complete before you design the eDirectory tree? (Choose 2.)

- A. Determine the scope of the design process
- B. Gather business information related to network design
- C. Plan a time synchronization strategy
- D. Plan the user environment
- E. Determine a partition and replica strategy

**Answer: A,B**

**QUESTION NO: 4**

Which agents are used by SLP? (Choose 3.)

- A. Routing agents
- B. Advertising agents
- C. Service agents
- D. Directory agents
- E. User agents
- F. Resource agents

**Answer: C,D,E**

**QUESTION NO: 5**

Which is recommended when designing the upper layers of your eDirectory tree?

- A. Create containers that reflect common employee access needs.
- B. Create a single organizational container object.
- C. Use a flat tree design.
- D. Minimize the number of login scripts.
- E. Avoid large container sizes.

**Answer: B**

**QUESTION NO: 6**

---

Which statements are true regarding subordinate reference replicas? (Choose 2.)

- A. Subordinate references only contain the partition root object.
- B. Subordinate references can be manually created by the administrator.
- C. Subordinate references link a parent partition with its child partition.
- D. Subordinate references can be changed to be a master replica without losing information.
- E. Subordinate references should be removed to help reduce traffic across the communication channel.

**Answer: A,C**

#### **QUESTION NO: 7**

What is the most important design consideration when designing the upper layers of an eDirectory tree?

- A. Partition and replica plan
- B. Number of objects in the tree
- C. Time synchronization strategy
- D. Number of servers in the tree
- E. Physical network infrastructure

**Answer: E**

#### **QUESTION NO: 8**

Which are benefits of creating an eDirectory naming standards document? (Choose 2.)

- A. The eDirectory tree can be navigated more intuitively.
- B. eDirectory traffic is minimized.
- C. eDirectory trees can be merged more easily.
- D. It helps aid in navigating the file system structure.
- E. Time synchronization will function between servers.

**Answer: A,C**

#### **QUESTION NO: 9**

As the project lead for your company's eDirectory design and implementation project, you have been following the eDirectory design cycle. You have completed the procedures in the project approach phase and the design phase. As you continue through the eDirectory design cycle, which procedure still needs to be completed?
