- D. print spooler service was started in the context of the system

**Answer: D**

**QUESTION NO: 3**

An administrator received phone calls from users who are unable to bypass authentication when they log onto their disconnected sessions.

What is the reason for this issue?

- A. NTLM v2 is not enabled in Active Directory.
- B. The administrator did not enable the Streaming Client trust.

- 
- C. Smart Card authentication was not enabled on the Web Interface site.
  - D. The administrator did not set a policy for the application delivery method.

**Answer: B**

#### **QUESTION NO: 4**

Users in different time zones have notified an administrator of a Presentation Server environment that the time displayed on their applications is incorrect.

How can the administrator correct this issue?

- A. Configure the Client Time Zone (CTZ) rule.
- B. Configure local time estimation for all users.
- C. Enable the time zone rule for the server in the policy.
- D. Disable the time zone rule Do not use client local time in the policy.

**Answer: D**

#### **QUESTION NO: 5**

Scenario: Users are unable to log on to their desktops in a Presentation Server farm. The users all receive a message that states:

"You do not have access to logon to this session."

How can the administrator troubleshoot this issue?

- A. Check the listener from the Presentation Server Console.
- B. Check the settings on the listener port in the Terminal Services Configuration.
- C. Look for the users' accounts in the User Summary Report in the Resource Manager node.
- D. Look at the amount of sessions on the server in the Server Summary Report from the Resource Manager node.

**Answer: B**

#### **QUESTION NO: 6**

How can an administrator remove a server in a Presentation Server farm from the load balance table after an IMA Service failure?

- 
- A. Enable the appropriate Health Monitoring check.
  - B. Configure the IMA Service to run QFARM/LOAD upon failure.
  - C. Enable the Load Throttling rule within the Server Load Evaluator.
  - D. Change the Windows services dependencies of the IMA Service.

**Answer: A**

#### **QUESTION NO: 7**

When restoring a backup of a Microsoft SQL data store database, what is the LAST thing that needs to be done to complete the restoration sequence?

- A. Copy the DSN file to the new database server.
- B. Verify that all servers are using the correct DSN.
- C. Stop and restart the IMA Service on all servers in the farm.
- D. Run the DSMANT CONFIG command to change the IMA Service configuration on all servers in the farm.

**Answer: C**

#### **QUESTION NO: 8**

An administrator needs to deliver a video-based training application that is highly graphical on a server running Presentation Server.

What should be enabled to configure this type of application?

- A. CPU optimization
- B. Memory optimization
- C. SpeedScreen Progressive Display
- D. SpeedScreen Browser Acceleration

**Answer: C**

#### **QUESTION NO: 9**

Scenario: An administrator just obtained a new server to add to a farm. Once the server is added to the farm it begins a trust query cycle. However, the cycle could not complete due to communication issues. Which component does the server need to communicate with to complete the trust query cycle?
