QUESTION NO: 1

An administrator created a vDisk and set it to standard image mode, the administrator named it "ISC+20". The administrator has also configured DHCP options 66 and 67. However, when the administrator begins the XenDesktop Setup Wizard the administrator does not see the vDisk. The administrator must modify the _____ in order to correctly configure the vDisk.

- A. DHCP boot options
- B. vDisk name
- C. access mode
- D. class and type

Answer: B

QUESTION NO: 2

An administrator must determine the shared storage necessary for the virtual desktops in a XenDesktop implementation. The XenDesktop environment will include Provisioning Server, XenApp and XenServer. The administrator will be using XenDesktop to provision virtual desktops to office workers desktop appliances. Which two requirements should the administrator consider to determine the shared storage necessary for the virtual desktops? (Choose two.)

- A. Location of the caching for Provisioning server
- B. The number of Desktop Delivery Controllers in the farm
- C. Number of standard images and private images
- D. Size of the XenApp farm

Answer: A,C

QUESTION NO: 3

An administrator is about to install XenDesktop 2.0 Enterprise Edition for a large environment with thousands of users. The administrator plans to install the desktop delivery controller and the components necessary to allow it to run correctly. According to best practices, what must the administrator install prior to installing the Desktop Delivery Controller in this environment?

- A. Virtual Desktop Agent
- B. Desktop Receiver
- C. Microsoft SQL Server
- D. Web Server

Answer: C

QUESTION NO: 4

An administrator is implementing a XenDesktop environment that will use XenApp to stream the applications, Provisioning server to stream the operating system and XenServer to host the virtual machines. The administrator has completed the installation of the components including the vDisks and is now beginning the creation of the virtual machines. Which template should the administrator create in this scenario?

- A. A TFTP chained bootstrap disk template
- B. A local fixed disk template
- C. A template without hard drive
- D. A template with two NICs

Answer: C

QUESTION NO: 5

An administrator recently edited several properties in a desktop group. Some of the changes the administrator made include: Changing the desktop group name
Modifying the idle pool settings
Changing the logoff behavior
Allowing all connections without the need for Access Gateway Standard Edition

Before editing the desktop group, the administrator also set up a policy to disable USB drive mapping for the desktop group. However, when the administrator tests the policy by logging into a virtual desktop as a user, USB drive mapping is still allowed.

How can the administrator configure the environment to work properly for the desktop group?

- A. Edit the policy to log off all users and reboot their virtual desktops
- B. Configure the policy so that all drives are disabled
- C. Configure the farm to disallow connections through Access Gateway Standard Edition
- D. Edit the desktop group name in the policy to match the new desktop group name

Answer: D

QUESTION NO: 6

An administrator is using the Provisioning Server image Builder to build target devices in a XenDesktop environment. What minimum information must the administrator input for the image builder to work in this environment?

- A. The optimizations options

-
- B. The drive letter assigned to the vDisk
 - C. The Microsoft Active Directory Domain for the XenDesktop environment
 - D. The IP address for the Desktop Delivery Controller

Answer: B

QUESTION NO: 7

An administrator receives several notices from users in a pooled desktop group that their startup time is taking longer than expected when they log on to their virtual desktops. How can the administrator reduce the amount of time users wait for their desktops to startup?

- A. Edit the logoff behavior to suspend the virtual machine
- B. Increase the idle desktop pool count
- C. Change the desktop group to pre-assigned
- D. Run dedicated blade PCS for the users in the desktop group

Answer: B

QUESTION NO: 8

An administrator is configuring a policy on XenApp to use the universal print driver only. The administrator has already enabled the universal driver and selected "Use universal driver only". The administrator must now _____ and _____.

- A. Disable "Turn off client printer mapping"
- B. Increase the priority of the policy
- C. Select "Do not automatically install drivers"
- D. Enable "Auto-create all client printers"

Answer: C,D

QUESTION NO: 9

An administrator has been tasked with adding additional target devices to a Provisioning Server Database for a XenDesktop environment using BIOS prompts. How should the administrator add the target devices to the database for this environment?

- A. Set the Provisioning Server Properties to add new target devices automatically using BIOS prompts
- B. Set the Target Device Properties to add new target devices using a template that includes prompts for computer name and description
