QUESTION NO: 1

Scenario: A network administrator needs to configure access to published resources in a Citrix XenApp farm through Access Gateway. The administrator will implement Access Gateway as a replacement for the current Secure Gateway deployment, which does NOT have SmartAccess. Which three steps must the administrator take for this scenario? (Choose three.)

- A. Set ICA Proxy to ON
- B. Configure split tunneling
- C. Set Single Sign-on Domain
- D. Configure the Secure Ticket Authority server
- E. Set the Access Gateway home page to the Web Interface URL

Answer: A,C,D

QUESTION NO: 2

Scenario: An administrator wants users to be able to access resources running on file servers and application servers in an environment. The administrator has deployed Access Gateway 9.0, Enterprise Edition. The Citrix Access Gateway Plugin for Windows is used to establish connections to the corporate network. There are no intranet applications configured in this environment and split tunneling is turned off. The default authorization policy is set to "Deny." Users in this environment will be able to access applications on file and application servers as long as _____. (Choose the correct phrase to complete the sentence.)

- A. Users are assigned specific intranet IP addresses
- B. An authorization policy is configured to grant them access
- C. Internal resources are assigned specific intranet IP addresses
- D. Internal resources in this environment are configured as published applications

Answer: B

QUESTION NO: 3

Scenario: An Access Gateway virtual server is configured with the following three settings:

ICA Proxy is set to ON

Web Interface address is set to "http://10.102.32.201:80/Citrix/AccessPlatform"

Clientless Access is set to ON

Client Choices is enabled

Which client choice(s) will be available to a user logging in from a client device running a Windows operating system?

-
- A. Web Interface only
 - B. Clientless Access only
 - C. Web Interface and Clientless Access
 - D. Access Gateway Plugin for Windows, Web Interface and Clientless Access

Answer: C

QUESTION NO: 4

Scenario: A system administrator created a new virtual server, "admin.widget.com", on an Access Gateway appliance. Only system administrators will be connecting to this virtual server. These system administrators require a full SSL VPN tunnel when connecting. Other users connect to another virtual server, "users.widget.com", which runs on the same Access Gateway appliance. Any user connecting through "users.widget.com" currently connects clientlessly. Which action must the administrator take to give the system administrators full VPN access?

- A. Edit the virtual server corresponding to admin.widget.com and enable the Citrix Access Gateway Plugin for ActiveX
- B. Create a session policy, set Clientless Access to Off in the profile associated with the policy and apply the policy to users.widget.com
- C. Create a session policy, set Clientless Access to Off in the profile associated with the policy and apply the policy to admin.widget.com
- D. Create a session policy, select Citrix Access Gateway Plugin for Windows as the "Windows PluginType" in the profile associated with the policy and apply the policy to admin.widget.com

Answer: D

QUESTION NO: 5

The Citrix Access Gateway Plugin for Windows needs administrative privileges _____ and _____ on a Windows XP device. (Choose the two correct phrases to complete the sentence.)

- A. For installation
- B. For upgrading or downgrading of the system
- C. For Endpoint Analysis checks that require administrative privileges
- D. For those rare situations where it will be used as an antivirus application

Answer: A,C

QUESTION NO: 6

An administrator wants to provide access to published applications hosted on XenApp servers only, without requiring the use of a Citrix Access Gateway Plugin for Windows. Which feature should the administrator enable in order to meet the needs of this environment?

- A. ICA proxy
- B. Single sign-on
- C. SmartAccess with ICA proxy
- D. Session Reliability on Web Interface

Answer: A

QUESTION NO: 7

Scenario: The wireless network in an environment is NOT secure, so users connecting over it need to log on to Access Gateway in order to access resources in the corporate intranet. The users in this environment are running Windows XP on their client devices and management has instructed the IT team to ensure that users are logged on automatically to Access Gateway using the Windows credentials they used to log on to their client devices. Which Access Gateway Plugin type should the IT team implement in this environment?

- A. Clientless Access
- B. Citrix Access Gateway Plugin for Java
- C. Citrix Access Gateway Plugin for ActiveX
- D. Citrix Access Gateway Plugin for Windows

Answer: D

QUESTION NO: 8

Scenario: A network administrator created multiple personal folder files (*.pst) on a workstation while accessing Outlook over a VPN session. The administrator would like for the *.pst files to be deleted upon logout from the VPN session. The administrator should configure the client cleanup to clean up _____. (Choose the correct option to complete the sentence.)

- A. Cookies
- B. *.pst files
- C. Address bars
- D. Application data

Answer: D
