QUESTION NO: 1

Which of the following tasks is the first task to perform when implementing Oracle Database Vault?

- A. Create command rules
- B. Create command rule sets
- C. Create protection realms
- D. Define master keys

Answer: C

Explanation:

From Vault Administrator Guide
What Are Realms?

After you create a realm, you can register a set of schema objects or roles (secured objects) for realmprotection and authorize a set of users or roles to access the secured objects.

QUESTION NO: 2

Why would you use an auto-open wallet Instead of a standard encryption wallet?

- A. To save on storage space
- B. To increase the level of security on your encrypted data
- C. To avoid manual Intervention to allow access to encrypted data after an automatic system restart
- D. You must use an auto-open wallet with tablespace-based Transparent Data Encryption (TDE)

Answer: C

Explanation:

Beacose wallet is closed after restart and it has to be opened again for using TDE.

You must enable auto login if you want single sign-on access to multiple Oracledatabases: such access is normally disabled, by default. Sometimes the obfuscated autologin wallets are called "SSO wallets" because they support single sign-on capability.

QUESTION NO: 3

Which two of the following features or options give you the ability to set fine-grained access control?

- A. Advanced Security Option
- B. Oracle Database Vault
- C. Oracle Audit Vault
- D. Virtual Private Database
- E. Oracle Label Security

Answer: A,E

Explanation:

Label Security is used to implement security based on data values in individual rows

QUESTION NO: 4

When will the changes in Database Vault access permissions take effect?

- A. Immediately
- B. The next time the database server is stopped and started
- C. After the next database backup
- D. After an ALTER SYSTEM DBV is issued

Answer: A

Explanation:

Changes to Database Vault permissions take effect immediately.

QUESTION NO: 5

Your customer wants to add an additional level of security to their data, based on values in individual records.

They can specify a group of records for access control with a simple WHERE clause. Which security feature or option will give them this capability for the lowest cost?

- A. Advanced Security Option
- B. Oracle Database Vault
- C. Oracle Audit Vault
- D. Oracle Data Masking Pack

-
- E. Virtual Private Database
 - F. Oracle Label Security

Answer: E

Explanation:

Oracle Virtual Private Database (VPD). This feature restricts data access by creating a policy that enforces a WHERE clause for all SQL statements that query the database. You create and manage the VPD policy at the database table or view level, which means that you do not modify the applications that access the database.

QUESTION NO: 6

Which of the following tasks is the first task to perform when implementing Oracle Database Vault?

- A. Create command rules
- B. Create command rule sets
- C. Create protection realms
- D. Define master keys

Answer: C

Explanation:

After you create a realm, you can register a set of schema objects or roles (secured objects) for realm protection and authorize a set of users or roles to access the secured objects.

QUESTION NO: 7

Which of the following is NOT a responsibility defined within Oracle Database Vault?

- A. Account Management
- B. Database Administration
- C. Security Administration
- D. RAC Administration

Answer: B

Explanation:

You can add/delete and configure Vault on RAC nodes. Can manage accounts and security.
