Answer: D
Explanation:

QUESTION NO: 5

A system administrator is testing the delivery of an application. During deployment, the administrator determines that the install path of an MSI needed to be changed without modifying the MSI. The administrator needs to change the command line parameters of the install package. Which policies would be affected when the default install command line of a software package is modified in the Software Catalog?

A. policies that are assigned to a non-managed computer
B. policies that leverage Software Discovery
C. policies currently referencing the modified entry
D. policies referencing staged software updates

Answer: C
Explanation:

QUESTION NO: 6

An administrator is reviewing software resources in the software catalog. There is a duplicate for a software resource. The administrator has initiated the Resolve Duplicate Software Resources Wizard and selected the option to merge duplicate resources. What will happen to the duplicate entries in the Software Catalog?

A. It creates a new software resource with the information from both entries and keeps the

duplicates.

B. It updates the original software resource with both unique identifiers and the duplicate is deleted.

C. It creates a new software resource with the information from both entries and the entry with the newest timestamp is deleted.

D. It updates the original software resources with the information from both entries and the entry with the oldest timestamp is deleted.

Answer: B
Explanation:

QUESTION NO: 7

When manually creating an entry within the Software Catalog, the administrator needs the Managed Delivery policy to verify that prerequisite software is installed before deploying a new application. What should the administrator use to execute a prerequisite check?

A. Detection Rule
B. Applicability Rule
C. Basic Inventory
D. Software Filter

Answer: B
Explanation:

QUESTION NO: 8

A system administrator discovers that an unauthorized piece of software called "Solitaire 2099" has been installed on company desktops. The software installs a browser toolbar that prevents the use of the company standard browser toolbar and needs to be removed immediately. The administrator has also been instructed to identify all users that are playing the game so that they can receive a private email about the situation. Which two capabilities of Inventory Solution will help the administrator? (Select two.)

A. Inventory Solution provides data about the number of installed instances of an application. B. Inventory Solution automatically associates software titles to users.
B. Inventory Solution automatically determines unauthorized software titles.
C. Inventory Solution tracks how often an application is executed.
D. Inventory Solution identifies harmful applications stored on local hard drives.

Answer: A,D
