Note: The answer is for reference only, you need to understand all question.

QUESTION 1

You work as the network administrator at ABC.com. You are in the process of configuring a Project Server 2010 environment.

You have configured two servers. A Windows Server 2008 R2 server named ABC-SQL1 runs SQL Server 2008 R2. A Windows Server 2008 R2 server named ABC-SPS1 runs SharePoint Server 2010 and Project Server 2010.

How can you configure the Project Server 2010 environment to allow Project Web App (PWA) to build OLAP cubes?

- A. You need to install the SQL Server 2008 Native Client and Analysis Management Objects on ABC- SPS1.
- B. You need to install the SQL Server 2008 Native Client and Analysis Management Objects on ABC-SQL1.
- C. You need to install SQL Server Analysis Services on ABC- SPS1.
- D. You need to configure a trusted data connection library in the Excel Services settings on ABC- SPS1.

Answer: A

QUESTION 2

You work as the network administrator at ABC.com. Your responsibilities include maintaining the Project Server 2010 environment.

The SQL Server 2008 R2 installation on a server named ABC-SQL1 includes the Analysis and Reporting Services. SharePoint Server 2010 and Project Server 2010 are installed on a server named ABC-SPS1.

You have been asked by the project manager to enable Project Server reporting.

Which services should you initialize to enable Project Server reporting?

- A. You should start the Excel Services Web Service then the Security Token Service.
- B. You should start the SQL Server Browser Service the Security Token Service.
- C. You should start the Excel Services Web Service then the Secure Store Service.
- D. You should start the Security Token Service then the Secure Store Service.

Answer: C

QUESTION 3

You work as the network administrator at ABC.com. You are in the process of configuring a Project Server 2010 environment.

A Windows Server 2008 R2 server named ABC-SQL1 runs SQL Server 2008 R2.

You have installed a Windows Server 2008 R2 server named ABC-SPS1. The next step is to install Project Server 2010 on ABC-SPS1. You run the Project Server 2010 installer on ABC-SPS1 but the installation does not complete. You receive an error message on ABC-SPS1 informing you that the server does not meet the minimum software prerequisites.

What is the easiest way to ensure that all the missing software prerequisites are installed?

- A. You should install the latest Windows service pack on ABC-SPS1.
- B. You should run Windows Update on ABC-SPS1.
- C. You should run the SharePoint 2010 Products Preparation Tool on ABC-SPS1.
- D. You should select the Complete Installation option in the Project Server 2010 setup.

Answer: C

QUESTION 4

You work as the network administrator at ABC.com. You are in the process of configuring a Project Server 2010 environment.

You have configured two servers. A Windows Server 2008 R2 server named ABC-SQL1 runs SQL Server 2008 and a Windows Server 2008 R2 server named ABC-SPS1 runs SharePoint Server 2010 and Project Server 2010.

You need to configure Microsoft SQL Server 2008 Analysis Services to build Project Server 2010 cubes. You log in using the Farm Administrator account and verify that the account has administrative permissions for the Analysis Services on ABC-SQL1.

What should you do next?

- A. You should upgrade Microsoft SQL Server 2008 on ABC-SQL1 to Microsoft SQL Server 2008 R2.
- B. You should assign the Farm Administrator account the Sysadmin role on ABC-SQL1.
- C. You should add the Farm Administrator account to the local Administrators group on ABC-SPS1.
- D. You should delete the Farm Administrator account from the OLAP group on ABC-SQL1.

Answer: C

QUESTION 5

You work as the network administrator at ABC.com. You have been asked to configure a new Project Server 2010 environment.

The Project Server 2010 environment will run on multiple virtual servers on the company's Microsoft HyperV platform.

Which server should you configure first?

- A. You should install and configure SQL Server first.
- B. You should install and configure Windows SharePoint Services 3.0 first.
- C. You should uninstall SharePoint Server 2008 first.
- D. You should install and configure Project Server 2007 first.
- E. You should install and configure a WINS Server first.

Answer: A

QUESTION 6

You work as the network administrator at ABC.com. You are in the process of configuring a Project Server 2010 environment.

A Windows Server 2008 R2 server named ABC-SPS1 runs SharePoint Server 2010 and Project Server 2010.

The database will run on a separate server named ABC-SQL1 running SQL Server 2008.

How should you configure the database to support remote users?

- A. You should the SQL Server 2008 Native Client on ABC-SQL1.
- B. You should configure ABC-SQL1 to accept desktop remote connections.
- C. You should create an exception in Windows Firewall on ABC-SQL1.
- D. You should install SQL Server Management Studio (SMSS) on ABC-SPS1.
- E. You should configure ABC-SQL1 to accept remote connections using TCP/IP.

Answer: E

QUESTION 7
