Topic 1, Scenario 1

Background

You are employed as a SharePoint administrator at ABC.com. ABC.com has a single Active Directory Domain Services (AD DS) domain, named ABC.com. Active Directory is used to host and administer user-specific data, which includes visual identification pictures. ABC.com's users are included in an organizational unit (OU), named ABCUsers.

You have been tasked with the installation of a SharePoint environment that includes multiple servers. This environment that will be used for information management and collaboration.

ABC.com has a server named ABC-SR01, which is configured to run the User Profile Synchronization service.

Business Prerequisites

ABC.com users should be able to access the portal via a single URL, regardless of where they are. These users should also have the ability to business data from an external network. The users should not, however, be allowed to use a VPN connection to retrieve this data.

ABC.com users should also be able to follow content writers and configure notifications for content adjustments. Furthermore, a ABC.com user should only be allowed to follow a maximum of 75 sites and people.

ABC.com's content writers should be able to make documents and large audio/visual media files available for use by internal and external users. Administrators should be able to promote search query results throughout ABC.com. Content should be shared via My Sites, and social communication options should be catered for.

Technical Prerequisites

Hardware and software installations for the SharePoint environment should not transcend the minimum specifications. The escalation of storage consumption should be regulated. Prior to creating new content databases, the usage for the current content databases should be enhanced. Network attached storage (NAS) should be used for storing sizeable files.

Files, databases, components, Web applications, and site collections should be configured to remain within the specified parameters. User profile information should be imported from Active Directory via the User Profile Synchronization service. The User Profile service account should be allocated the minimum required permissions for reading information.

The most recent software updates should be available for existing and forthcoming SharePoint environments, and predefined database naming conventions should be utilized. The path shown below should be used for generating exclusive user sites:

QUESTION NO: 1

Subsequent to establishing a User Profile Synchronization connection, you required to make sure that the synchronization account is assigned the proper permissions.

Which of the following actions should you take?

- A. You should consider assigning the Replicate Directory Changes permission on the cn=configuration container.
- B. You should consider assigning the Create Child Objects and Write permission.
- C. You should consider assigning the Read permission on the domain.
- D. You should consider assigning the Replicate Directory Changes permission on the domain.

Answer: D

Explanation:

QUESTION NO: 2

You have been instructed to make sure content writers are able publish files as specified in the prerequisites.

You start by creating multiple authoring site collections. You are now preparing to create a site.

Which of the following should not be included in the site?

- A. Lists.
- B. Document libraries.
- C. A Pages library.
- D. An asset library.

Answer: D

Explanation:

QUESTION NO: 3

You are required to make sure that the visual identification pictures of ABC.com's users are added to SharePoint user profiles. You want to make sure that the process requires as little management resources as possible.

You have Defined a mapping for the thumbnailPhoto attribute of the Picture user profile property, and configured a full synchronization of the User Profile Synchronization service.

Which of the following actions should you take NEXT?

- A. You should consider making use of the Update-SPProfilePhotoStore Windows PowerShell cmdlet.
- B. You should consider making use of the New-SPProfileServiceApplication Windows PowerShell cmdlet.
- C. You should consider making use of the Start-SPProfileServiceFullReplication Windows PowerShell cmdlet.
- D. You should consider making use of the Start-SPProfileServiceRecoveryReplication Windows PowerShell cmdlet.

Answer: A

Explanation:

QUESTION NO: 4

You have been instructed to satisfy the prerequisites with regards to future SharePoint server installations.

You want to make sure that the content of the SharePoint installation media and software updates are included in the Updates folder.

Which of the following actions should you take?

- A. You should consider making use of the /extract:<path> command.
- B. You should consider making use of the /mount:<path> command.
- C. You should consider making use of the /obtain:<path> command.
- D. You should consider making use of the /enable:<path> command.

Answer: A

Explanation:

QUESTION NO: 5

You are in the process of configuring sizing and performance recommendations with regards to general usage situations.
