QUESTION NO: 1

You are employed as an administrator at ABC.com. ABC.com network has an Active Directory domain, named ABC.com.

ABC.com has recently migrated to Office 365. ABC.com has 7500 user accounts that were generated through the course of Office 365 migration and testing. Of this total, only a third is valid Office 365 licenses that were allocated to ABC.com's active users.

You have been instructed to make sure that the unlicensed user accounts are deleted. Your actions should not require unnecessary administrative interaction.

You start by running the Get-MsolUser cmdlet with the -All -UnlicensedUsersOnly parameters. You are preparing to follow up this cmdlet with the Remove-MsolUser cmdlet.

Which of the following is the parameter that should be used with this cmdlet?

- A. The -TenantId parameter.
- B. The -UserPrincipalName parameter.
- C. The -Force parameter.
- D. The -RemoveFromRecycleBin parameter.

Answer: C

QUESTION NO: 2

You are employed as an administrator at ABC.com. ABC.com network has an Active Directory domain, named ABC.com. The ABC.com network has Windows 8 workstations installed.

Part of your duties is to administer cloud identities in Office 365. To achieve this, you have to make use of Windows PowerShell.

You want to install the required software on your workstation.

Which of the following actions should you take FIRST?

- A. You should consider installing the Windows Azure Active Directory module for Windows PowerShell.

-
- B. You should consider installing the Rights Management module for Windows PowerShell.
 - C. You should consider installing the Microsoft Online Services Module for Windows PowerShell.
 - D. You should consider installing the Microsoft Online Services Sign-in Assistant.

Answer: D

QUESTION NO: 4

You are employed as an administrator at ABC.com. ABC.com has an Active Directory Domain Services domain, named ABC.local.

ABC.com would like to employ Office 365 services to allow cooperation among their divisions. Subsequent to deploying the Windows Azure Active Directory Sync tool, you are instructed to configure single sign-on (SSO) for Office 365.

You want to make sure that only the user accounts that have legitimate routable domain names and belong to certain divisions are synchronized. To achieve this, you are required to add the ABC.com UPN suffix to the ABC.local domain.

Which of the following is the snap-in you should make use of?

- A. The Certificates MMC snap-in.
- B. The Active Directory Users and Computers MMC snap-in.
- C. The Active Directory Domains and Trusts MMC snap-in.
- D. The Distributed File System MMC snap-in.

Answer: C

Explanation:

QUESTION NO: 5

You are employed as an administrator at ABC.com. ABC.com network has an Active Directory forest, named ABC.com. All servers on the ABC.com network have Windows Server 2012 installed.

ABC.com has a member server, named ABC-SR07, and a standalone server, named ABC-SR13. You have been informed of the intended Office 365 tenant deployment.

You plan to provision users via the Windows Azure Active Directory Sync tool.

Which of the following actions should you take FIRST?

- A. You should consider installing and running the Windows Azure Active Directory Sync tool on ABC-SR07.
- B. You should consider installing and running the Windows Azure Active Directory Sync tool on ABC-SR13.
- C. You should consider installing and running the AD FS on ABC-SR07.
- D. You should consider installing and running the AD FS on ABC-SR13.

Answer: A
