Note: The answer is for reference only, you need to understand all question.

Exam A

QUESTION 1

Your company has a System Center Operations Manager 2007 environment.

The company has four branch offices, which are connected by a wide area network (WAN). The routers that connect the branch offices to the main office experience occasional failures. You need to configure Operations Manager 2007 to discover branch office routers and to monitor for device failure. What should you do?

- A. Perform automatic discovery by using the Computer and Device Management Wizard to add the branch office routers as monitored objects.
- B. Perform advanced discovery by using the Computer and Device Management Wizard to add the branch office routers as monitored objects.
- C. Run the New-CustomMonitoringObject PowerShell commandlet on the Management Server. Use the Set-ProxyAgent commandlet to set a proxy agent to remotely monitor branch office routers.
- D. Run the New-Object PowerShell commandlet on the Management Server. Use the Set-ProxyAgent commandlet to set a proxy agent to remotely monitor branch office routers.

Answer: B

QUESTION 2

You deploy System Center Operations Manager 2007 in your company's Active Directory domain. You manually install an Operations Manager agent on an application server named Server1. Server1 is a member of the Active Directory domain. The agent does not appear in the Pending Management view in the Operations Console. An error message in the Operations Manager Event log on Server1 indicates that the agent is unable to obtain configuration information from the Management Server. You need to ensure that the agent appears in the Pending Management view in the Operations Console. What should you do?

- A. Select the Review new manual agent installations in pending management view option.
- B. Configure the agent on Server1 to use certificate-based authentication.
- C. Add the Management Server action account to the local Administrators group on Server1. Restart the Health Service on Server1.
- D. Disable mutual authentication in the Operations Console. Restart the Health Service on Server1.

Answer: A

QUESTION 3

Your company has two Active Directory domains. One domain is located in the trusted network. The other domain is located in the perimeter network. No trust relationship exists between the two domains. You deploy

System Center Operations Manager 2007 in the Active Directory domain on the trusted network. You manually install the agent on an application server that resides in the Active Directory domain in the perimeter network. The agent does not appear in the Operations Console. An error event indicates that the agent is unable to obtain configuration information from the Management Server. You need to configure Operations Manager 2007 to monitor the agent. What should you do?

- A. Disable mutual authentication in the Operations Console.
- B. Perform a push installation of the agent to the target server.
- C. Configure the agent on the application server to use certificate-based authentication.
- D. On the Management Server, configure Auto Agent Assignment settings. Use the MOMADAdmin utility to publish Management Group information to the Active Directory domain in the perimeter network.

Answer: C

QUESTION 4

You install System Center Operations Manager 2007 on all your companys servers. You configure Operations Manager 2007 to monitor the health status of all applications. The technical support team reports that they are not receiving e-mail notification when an application fails.

You need to ensure that the technical support team receives e-mail notification when an application fails. What should you do?

- A. Create a new user role that is based on the Advanced Operator profile. Filter a notification subscription to this new role.
- B. Create a new user role that is based on the Operator profile. Filter a notification subscription to this new role.
- C. Enable e-mail notification. Create a new notification subscription based on Alert Aging.
- D. Enable e-mail notification. Create a new notification recipient, and then create a new notification subscription.

Answer: D

QUESTION 5

Your company deploys System Center Operations Manager 2007 agents as part of a computer image. You join all computers in the company to the corporate Active Directory domain. You need to ensure that agents automatically obtain settings from the corporate Active Directory domain at startup. Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Use the MOMADAdmin utility to publish Management Group information to the corporate Active Directory domain.
- B. Run the Discovery Wizard. Perform automatic computer discovery to scan Active Directory for installed agents.

- C. Configure Auto Agent Assignment on the target Management Server to assign desired computers to the target Management Server.
- D. Configure an Active Directory Group Policy object (GPO) to publish Management Group information to computers in the corporate Active Directory domain.

Answer: AC

QUESTION 6

You have a System Center Operations Manager 2007 environment. You configure notification subscriptions to send e-mail alert notifications to separate Active Directory, Exchange Server, and SQL Server support teams when errors occur. You need to reduce the number of characters that are displayed in the e-mail notification for all alerts. What should you do?

- A. In the Notification settings, modify the default notification format for instant messages.
- B. In the Notification settings, enable Short Message Service (SMS) notifications.
- C. In the Notification settings, modify the default notification format for e-mail messages.
- D. In the notification subscription for the Active Directory support team, modify the default notification format for e-mail messages.

Answer: C

QUESTION 7

You deploy System Center Operations Manager 2007 at your company. The company has three Microsoft Exchange Server 2003 computers. You need to ensure that the Exchange administrators are able only to override the configuration of rules and monitors. What should you do?

- A. Create a user role that is based on the Author profile. Add the Exchange administrators to this new role.
- B. Create a user role that is based on the Advanced Operator profile. Add the Exchange administrators to this new role.
- C. Add the Exchange administrators to the Operations Manager Operators user role.
- D. Add the Exchange administrators to the Operations Manager Administrators user role.

Answer: B

QUESTION 8

You have a System Center Operations Manager 2007 environment. Your company has 10 Microsoft SQL Server 2005 computers and 5 SQL Server 2000 computers. Currently, you do not receive alerts for long-running SQL S2005 agent jobs. You need to monitor the job duration of only the SQL 2005 agent jobs. What should you do?
