For the most up-to-date exam questions and materials, we recommend visiting our website, where you can access the latest content and resources.

Note: The answer is for reference only, you need to understand all question.

QUESTION 1

Your network contains the following:

- 20 Hyper-V hosts
 - 100 virtual machines
 - client computers
- You need to recommend an update infrastructure design to meet the following requirements: Deploy updates to of the all virtual machines and the client computers from a single console. Generate reports that contain a list of the applied updates. What should you recommend? More than one answer choice may achieve the goal. Select the BEST answer.

One Windows Server update Services (WSUS) server integrated with Microsoft System Center 2012 Configuration Manager and a second WSUS server that is integrated with Microsoft System Center 2012 Virtual Machine Manager (VMM)

One Windows Server Update Services (WSUS) server integrated with Microsoft System Center 2012 Configuration Manager and Microsoft System Center 2012 Virtual Machine Manager (VMM)

One Windows Server Update Services (WSUS) server integrated with Microsoft System Center 2012 Virtual Machine Manager (VMM)

One Windows Server Update Services (WSUS) server integrated with Microsoft System Center 2012 Configuration Manager, a second WSUS server integrated with Microsoft System Center 2012 Virtual Machine Manager (VMM), and a third standalone WSUS server.

CorrectAnswer:B

QUESTION 2

Your network contains an Active Directory domain named contoso.com. The domain contains a Microsoft System Center 2012 infrastructure. You deploy a service named Service1 by using a service template. Service1 contains two virtual machines. The virtual machines are configured as shown in the following table.

Virtual machine name	Roles and software
VM1	Web server Windows Server 2012 Operations Manager agent Configuration Manager agent
VM2	Windows Server 2012 Operations Manager agent Microsoft SQL Server 2012 Configuration Manager agent

You need to recommend a monitoring solution to ensure that an administrator can review the availability

information of Service1. What should you do?

- A. From Configuration Manager, create a Collection and a Desired Configuration Management baseline.
- B. From Virtual Machine Manager (VMM), modify the properties of the service template.
- C. From Operations Manager, create a Distributed Application and a Monitor Override.
- D. From Operations Manager, create a Distributed Application and a Service Level Tracking object.

CorrectAnswer: D

QUESTION 3

Your network contains an Active Directory domain named contoso.com. You plan to implement Microsoft System Center 2012. You need to identify which solution automates the membership of security groups for contoso.com. The solution must use workflows that provide administrators with the ability to approve the addition of members to the security groups. Which System Center 2012 roles should you identify?

- A. Service Manager and Virtual Machine Manager (VMM)
- B. Configuration Manager and Orchestrator
- C. Operations Manager and Orchestrator
- D. Orchestrator and Service Manager

CorrectAnswer: D

Question 4

Your network contains 10 servers that run Windows Server 2012. The servers have the Hyper-V server role installed. The servers host a Virtual Desktop Infrastructure (VDI) that contains persistent virtual machines. Each virtual machine is assigned to a specific user. Users can install software on their specific virtual machine. You need to implement a solution to generate monthly reports that contain a list of all the installed software on the virtual machines. The solution must NOT require the installation of additional software on the virtual machines. Which solution should you implement?

- A. A Microsoft System Center 2012 Configuration Manager software inventory
- B. A Microsoft System Center 2012 Configuration Manager hardware inventory
- C. Microsoft Assessment and Planning (MAP) Toolkit scans
- D. Microsoft Audit Collection Services (ACS) audit logs

CorrectAnswer: C

Question 5

Your network contains 20 servers that run Windows Server 2012. The servers have the Hyper-V server role installed. You plan to deploy a management solution. You need to recommend which Microsoft System Center 2012 roles must be deployed to meet the following requirements: An administrator must be notified when an

incident occurs, such as a serious error in the event log, on a Hyper-V host, or on a virtual machine. An administrator must be able to assign an incident to a specific administrator for resolution. An incident that remains unresolved for more than 10 hours must be escalated automatically to another administrator. Administrators must be able to generate reports that contain the details of incidents and escalations. Which System Center 2012 roles should you recommend? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Operations Manager and Service Manager
- B. Service Manager and Virtual Machine Manager (VMM)
- C. Configuration Manager and Service Manager
- D. Operations Manager and Orchestrator

CorrectAnswer: A

Question 6

Your company has a human resources department, a finance department, a sales department, and an R&D department. The company audits the access of documents that contain department-specific sensitive information. You are planning an administrative model for the departments to meet the following requirements:

- Provide R&D managers with the ability to back up all the files of their department only.
 - Provide finance managers with the ability to view the audit logs for the files of their department only.
 - Provide human resources managers with the ability to view the audit logs for the files of their department only.
 - Provide sales managers with the ability to modify the permissions on all the shared folders of their department only

You need to identify the minimum amount of file servers required on the network to meet the requirements of each department. How many file servers should you identify?

- A. 1
- B. 2
- C. 3
- D. 4

CorrectAnswer: C

Question 7

Your company has a main office and a branch office. Each office contains several hundred computers that run Windows 2012. You plan to deploy two Windows Server Update Services (WSUS) servers. The WSUS servers will be configured as shown in the following table.
