QUESTION 1

Your company has a main office and 10 branch offices Each branch office connects to the main office by using

a low-bandwidth WAN link. All servers run Windows Server 2012. All client computers run Windows 8. You plan

to deploy 20 new line-of-business applications to all of the client computers. You purchase 5,000 client licenses

for the line-of-business applications. You need to recommend an application distribution solution. The solution

must be able to meet the following requirements:

Download application installation files from a server in the local site.

Generate reports that contain information about the installed applications.

Generate administrative alerts when the number of installed applications exceeds the number of purchased

licenses.

What should you include in the recommendation?

A. Applications published as RemoteApp programs

B. Assigned applications by using Group Policy objects (GPOs)

C. Applications deployed by using Microsoft System Center 2012 Configuration Manager

D. Published applications by using Microsoft Application Virtualization (App-V) publishing servers Correct

Answer: C

QUESTION 2

Your company has a main office and two branch offices. The branch offices connect to the main office by using

a slow WAN link. You plan to deploy applications to all of the offices by using Microsoft Application Visualization

(App-V) 5.0

streaming. You need to recommend the server placement for the planned infrastructure. What should you

recommend?

More than one answer choice may achieve the goal. Select the BEST answer.

A. In the main office, deploy a management server, a database server, and a publishing server. In the branch

offices, deploy a publishing server.

B. In the main office, deploy a database server and a publishing server. In the branch offices, deploy a management server, a database server, and a publishing server.

C. In the main office, deploy a management server, a database server, and a publishing server. In the branch offices, deploy a database server.

D. In each office, deploy a management server, a database server, and a publishing server. Correct **Answer:** A

QUESTION 3

Your network contains an Active Directory domain named contoso.com. The domain contains 500 client computers that run Windows 8.

You plan to deploy two applications named App1 and App2 to the client computers.

App2 is updated by the application manufacturer every month. You need to recommend an application distribution strategy for the applications. The solution must meet the following requirements:

The executable files of App1 must NOT be stored on the client computers.

Users who run App2 must run the latest version of App2 only. What should you recommend using to deploy the applications?

A.   Microsoft Application Virtualization (App-V) in streaming mode

B.   A Group Policy software distribution package that is published to the user accounts

C.   Windows XP Mode

D.   A Group Policy software distribution package that is assigned to the user accounts

Answer: A

QUESTION 4

Your network contains an Active Directory domain named contoso.com. All client computers run Windows 7. You plan to upgrade all of the client computers to Windows 8. You install the Microsoft Application Compatibility Toolkit (ACT) on a server named Server1. You configure Server1 to host the Log Processing Service shared folder. You need to recommend which permissions must be assigned to the Log Processing Service shared folder. The solution must provide the least amount of permissions to the shared folder. Which permissions

should you recommend assigning to the Everyone group on the shared folder? (Each correct answer presents part of the solution. Choose all that apply.)

A. Write NTFS permissions

B. Read NTFS permissions

C. Change Share permissions

D. Read NTFS permissions and Execute NTFS permissions

E. Read Share permissions

Answer: BD

QUESTION 5

Your network contains an Active Directory domain named contoso.com. All servers run Windows Server 2012.

All client computers run Windows 8. The domain contains a Remote Desktop Services (RDS) infrastructure and a Microsoft Application

Visualization (App-V) infrastructure. Domain users use version 1.0 of a third-party application named App1.

Version 2.0 of App1 is released.

Version 1.0 and version 2.0 cannot be installed on the same client computer. You need to recommend a solution to ensure that the users can run both versions of App1 simultaneously. The solution must meet the following requirements:

Provide users with the ability to run App1 while they are disconnected from the corporate network.

Minimize the amount of disk space required. What should you include in the recommendation?

A.   Use App-V to sequence and publish version 2.0 of Appl.

B.   Publish version 2.0 of App1 as a RemoteApp program.

C.   Create a shim for version 2.0 of App1 by using the Microsoft Application Compatibility Toolkit (ACT).

D.   Deploy version 2.0 of App1 on a virtual machine on the client computers.

Answer: A

QUESTION 6
