For the most up-to-date exam questions and materials, we recommend visiting our website, where you can access the latest content and resources.

Note: The answer is for reference only, you need to understand all question.

### QUESTION 1

You are creating a Windows Forms application by using the .NET Framework 3.5.

You create a new form in your application.

You add a PrintDocument control named pntDoc to the form.

To support the print functionality, you write the following code segment in the application

(Line numbers are included for reference only.)

```
01 pntDoc.BeginPrint += new PrintEventHandler(PrintDoc_BeginPrint) ;  
02  
03 bool.canPrint = CheckPrintAccessControl() ;  
04 if (!canPrint) {  
05  
06 }  
07
```

You need to ensure that the following requirements are met:

- When the user has no print access, font and file stream initializations are not executed and the print operation is cancelled
- Print operations are logged whether or not the user has print access

What should you do ?

- A. Add the following code segment at line 05  
pntDoc.BeginPrint -= new PrintEventHandler(PrintDoc\_BeginPrint);  
pntDoc.BeginPrint += new PrintEventHandler((obj, args) => args.Cancel = true);  
Add the following code segment at line 07  
pntDoc.BeginPrint += new PrintEventHandler((obj1, args1) => LogPrintOperation());
- B. Add the following code segment at line 05  
pntDoc.BeginPrint += new PrintEventHandler(delegate(object.obj, PrintEventArgs.args){});  
Add the following code segment at line 07  
pntDoc.BeginPrint -= new PrintEventHandler(PrintDoc\_BeginPrint);  
pntDoc.BeginPrint += new PrintEventHandler((obj1, args1) => LogPrintOperation());
- C. Add the following code segment at line 05  
pntDoc.BeginPrint -= new PrintEventHandler(PrintDoc\_BeginPrint);  
pntDoc.BeginPrint -= new PrintEventHandler(delegate(object.obj, PrintEventArgs.args){});  
Add the following code segment at line 07  
pntDoc.BeginPrint -= new PrintEventHandler((obj1, args1) => LogPrintOperation());
- D. Add the following code segment at line 05  
pntDoc.BeginPrint += new PrintEventHandler((obj, args) => args.Cancel = true);  
Add the following code segment at line 07

```
pntDoc.BeginPrint += new PrintEventHandler(PrintDoc_BeginPrint);  
pntDoc.BeginPrint -= new PrintEventHandler((obj1, args1) => LogPrintOperation());
```

**Answer: A**

## QUESTION 2

You are creating a Windows Forms application that has the print functionality by using the .NET Framework 3.5.

You implement the `PrintPage` page event for the form.

You associate an instance of the `PrintDocument` control along with an instance of the `PrintPreviewDialog` control named `prevDialog1`.

You want to set the default size of the `PrintPreviewDialog` class to full screen.

You need to provide a print preview for the user by adding a code segment to the `Click` event of the button on the form.

Which code segment should you use ?

- A. `prevDialog1.Width = Screen.PrimaryScreen.Bounds.Width;`  
`prevDialog1.Height = Screen.PrimaryScreen.Bounds.Height;`  
`prevDialog1.ShowDialog() ;`
- B. `prevDialog1.Width = 1024 ;`  
`prevDialog1.Height = 768 ;`  
`prevDialog1.ShowDialog() ;`
- C. `prevDialog1.Width = prevDialog1.PrintPreviewControl.Width ;`  
`prevDialog1.Height.= prevDialog1.PrintPreviewControl.Height;`  
`prevDialog1.ShowDialog() ;`
- D. `prevDialog1.Width = prevDialog1.PrintPreviewControl.Width ;`  
`prevDialog1.Height.= prevDialog1.PrintPreviewControl.Height;`  
`prevDialog1.Update();`

**Answer: A**

## QUESTION 3

You are creating a Windows Forms application by using the .NET Framework 3.5.

The application is configured to use rolebased security.

You need to ensure that users can print reports only by selecting a printer from the printer dialog box.

You want to achieve this goal by using the minimum level of permission.

Which code segment should you use?

- A. [System.Drawing.Printing.PrintingPermission (System.Security.Permissions.SecurityAction.Demand, Level=System.Drawing.Printing.PrintingPermissionLevel.AllPrinting)];
- B. [System.Drawing.Printing.PrintingPermission (System.Security.Permissions.SecurityAction.Demand, Level=System.Drawing.Printing.PrintingPermissionLevel.NoPrinting)];
- C. [System.Drawing.Printing.PrintingPermission (System.Security.Permissions.SecurityAction.Demand, Level=System.Drawing.Printing.PrintingPermissionLevel.DefaultPrinting)];
- D. [System.Drawing.Printing.PrintingPermission (System.Security.Permissions.SecurityAction.Demand, Level=System.Drawing.Printing.PrintingPermissionLevel.SafePrinting)];

**Answer: D**

#### **QUESTION 4**

You are creating a Windows Forms application for the design of circuit boards and electronic equipment. You use the .NET Framework 3.5 to create the application x that allows designers to preview designs before printing them.

The previewed documents must meet the following requirements:

- The graphics and text are displayed clearly
- The fullscale preview is set as default for the documents
- The zoom setting of the preview control is adjusted automatically when the form is resized

You need to ensure that the requirements are met when the form that contains the custom print preview control is displayed.

Which code segment should you use?

- A. `printPreviewControl1.UseAntiAlias = true ;`  
`printPreviewControl1.AutoZoom = true ;`  
`printPreviewControl1.Zoom = 1.0 ;`
- B. `printPreviewControl1.UseAntiAlias = true ;`  
`printPreviewControl1.AutoZoom = true ;`  
`printPreviewControl1.Zoom = 100.0 ;`
- C. `printPreviewControl1.UseAntiAlias = true ;`  
`printPreviewControl1.AutoZoom = false ;`  
`printPreviewControl1.Zoom = 1.0 ;`
- D. `printPreviewControl1.UseAntiAlias = false ;`  
`printPreviewControl1.AutoZoom = false ;`  
`printPreviewControl1.Zoom = 100.0 ;`

**Answer: A**
