Configuring Windows 8

DEMO

QUESTION NO: 1

You are employed as an administrator at ABC.com. The ABC.com network is made up of an Active Directory Domain Services (AD DS) domain, named ABC.com. All workstations on the ABC.com network have Windows 8 installed.

You have recently created and shared a folder on the ABC.com network. You have granted ABC.com's Managers group Read permission, and the Sales group Read and Write permissions.

What action should you take to make sure that these groups are unable to remove the shared network folder?

A. You should consider only granting the Sales group the Delete Subfolders and Files special permission.
B. You should consider granting the Sales group and the Managers group the Delete Subfolders and Files special permission.
C. You should consider only granting the Managers group the Delete Subfolders and Files special permission.
D. You should consider granting the Managers group full permission.

Answer: A
Explanation:

QUESTION NO: 2

You are employed as an administrator at ABC.com. The ABC.com network is made up of an Active Directory Domain Services (AD DS) domain, named ABC.com. All workstations on the ABC.com network have Windows 8 installed.

You have been assigned to a workstation, named ABC-WS13. You want to make sure that you are not notified when you modify the Windows settings on ABC-WS13.

Which of the following actions should you take?

A. You should consider making sure that the User Account Control: Run all administrators Admin Approval Mode policy setting on ABC-WS13 is enabled.
B. You should consider making sure that the User Account Control: Run all administrators Admin Approval Mode policy setting on ABC-WS13 is disabled.
C. You should consider configuring a new Group Policy object (GPO) to disable the Run all administrators in Admin Approval Mode policy.
D. You should consider configuring a new Group Policy object (GPO) to enable the Run all administrators in Admin Approval Mode policy.

QUESTION NO: 3

You are employed as an administrator at ABC.com. The ABC.com network is made up of an Active Directory Domain Services (AD DS) domain, named ABC.com. All workstations on the ABC.com network have Windows 8 installed.

A workstation in the Marketing department, named ABC-WS 07, has a locally attached printer, which has been configured as a shared printer. ABC-WS 07's operator is included in the Marketing group.

You assigned the Marketing group the Manage documents permission

What does this permission allow?

A. It allows the Marketing group to add, delete, and configure ports on a print server.
B. It allows the Marketing group to view, pause, restart, and cancel all print jobs in a queue.
C. It allows the Marketing group to configure printer security permissions in a print queue.
D. It allows the Marketing group to add a print driver to a print server.

Answer: B
Explanation:

QUESTION NO: 4

You are employed as an administrator at ABC.com. The ABC.com network is made up of an Active Directory Domain Services (AD DS) domain, named ABC.com. All workstations on the ABC.com network, including laptops, have Windows 8 installed.

Certain ABC.com users have just been issued laptops for use outside the office. These users currently log in to their desktop workstations using a Windows domain account.

They would like their laptops to be set up exactly like their desktop workstations.

Which of the following would easily allow them to achieve this?

A. They should consider linking their Windows domain accounts to a Windows Live ID.
B. They should consider making use of picture passwords.
C. They should consider making use of the File and Transfer wizard.
D. They should consider making use of USMT.

Answer: A
Explanation:

QUESTION NO: 5

You are employed as an administrator at ABC.com. The ABC.com network is made up of an Active Directory Domain Services (AD DS) domain, named ABC.com. All workstations on the ABC.com network have Windows 8 installed.

You have just installed a custom application on your workstation. You notice that the workstation is reacting uncharacteristically.

You want to make sure that your workstation is in the same state it was the previous day.

Which of the following actions should you take?

A. You should consider restoring yesterday's daily back up
B. You should consider making use of File History.
C. You should consider making use of the System Restore option.
D. You should consider making use of Time Machine.

Answer: C
Explanation:

QUESTION NO: 6

You are employed as an administrator at ABC.com. The ABC.com network is made up of an Active Directory Domain Services (AD DS) domain, named ABC.com. All workstations on the ABC.com network have Windows 8 installed.

ABC.com has a workstation, named ABC-WS13, which includes two dynamic hard drives that has the C: and D: drive letters assigned. Drive C: is 320 GB in size, of which 92% of the available space has been used. Drive D: is 640 GB in size, of which only 10% of the available space has been used.
