QUESTION NO: 1

Deborah installed a utility that downloads movies from her Mac OS X v10.4 computer to a digital video recorder (DVR), so she can play them on her television. But the DVR is only able to access the movies files on her computer while she has the firewall on the computer turned off. How can Deborah configure her system to allow the DVR to access movie files on her computer while the firewall is on?

A. Using a text editor, add the port numbers used by the movie sharing utility to /etc/firewall.plist.
B. In the Firewall pane of Sharing preferences, create a new port definition with the port numbers used by the movie sharing utility, then turn the port on in the firewall list of ports.
C. In the Firewall pane of Network preferences, enter the range of ports used by the movie sharing utility in the Allow list.
D. Using the Firewall Manager utility, add the port numbers used by the sharing utility to /etc/firewall.plist, then enable the ports in the Firewall pane of Sharing preferences.

Answer: B

QUESTION NO: 2
