Answer: A

Explanation:

QUESTION NO: 7

You want a Mac OS X Server v10.6 computer to use an XML configuration file to configure itself when it starts up for the first time. Which is a valid location to store the configuration file?

- A. In /Users/Shared/Auto-Config/ on your DHCP server
- B. In /Volumes/usbdrive/Auto Server Setup/ on the new server
- C. On any Software Update server on the same subnet as the new server
- D. In /Users/Shared/Auto Server Setup/ on any Mac OS X server on your network

Answer: B

Explanation:

QUESTION NO: 8

You want to install and configure Mac OS X Server v10.6 on a computer that has been added to your network.

Which steps can you take so the computer will automatically configure itself when it restarts after the installation?

- A. Save the configuration details as a text file named generic.list, and store the file at the root of the computer's hard drive.
- B. Save the configuration details as a file named setup.list, and store the file in a folder named Auto Server Setup on the root of the computer's hard drive.
- C. Save the configuration details as a record in a directory service running on your network, with the MAC Address of the computer as the name of the record.
