**QUESTION NO: 1**

Which statement is true about the default behavior of Sharing preferences when a NetBoot image is created?

- A. The sharing name of the client will be blank unless provided by a DHCP server.
- B. All clients will use the same .local host name unless DNS names are provided.
- C. The sharing name will be generated using the client's unique Ethernet MAC address.
- D. The sharing default behavior will prevent the NetBoot image from being created.

**Answer: C**

**QUESTION NO: 2**

You have an application that must be installed to / (root of the volume). However, you wish to install the application on a computer that is in Target Disk mode, and the target volume is in /Volumes. Identify a possible solution in Mac OS X v10.4.

- A. Rename the target volume so that it matches the name of the root (/) volume.
- B. Create a disk image of the target volume, install the application, and restore the disk image to the target volume without erasing the existing contents.
- C. Identify the files that were installed during testing and create a custom installation package that installs the files in the correct locations.
- D. Copy the volume from /Volumes to /.

**Answer: C**

**QUESTION NO: 3**

In PackageMaker on Mac OS X v10.4, one difference between distribution scripts and the predefined package scripts (such as postinstall or VolumeCheck) is that distribution scripts \_\_\_\_\_.

- A. have greater cross-compatibility between different versions of Mac OS X
- B. provide version tracking and control
- C. allow customization of the Welcome pane
- D. are scripted with JavaScript rather than shell scripts

**Answer: D**

**QUESTION NO: 4**

---

---

Which ASR image format results in the fastest local image restore?

- A. Read only - Compressed
- B. Read only - Uncompressed
- C. Read/Write - Uncompressed
- D. Read/Write - Compressed

**Answer: B**

**QUESTION NO: 5**

In Server Admin, you can choose to deliver a NetBoot image with the ciskless option selected. This feature is used to \_\_\_\_\_.

- A. ensure that items saved to ~/Documents are located on a network home folder
- B. ensure better performance of the client computer by caching the NetBoot image
- C. create a virtual pool of NetBoot images to balance the client load
- D. allow restoration of a target volume while started up from the NetBoot volume

**Answer: D**

**QUESTION NO: 6**

In Mac OS X v10.4, a custom installation package (.pkg file) can be configured to \_\_\_\_\_.

- A. put software in multiple locations throughout the file system
- B. be a startup volume to facilitate the installation of driver software
- C. track changes made to a computer and automatically reverse those changes
- D. standardize the configuration of disk partitions

**Answer: A**

**QUESTION NO: 7**

You need to install Mac OS X v10.4 simultaneously on multiple computers from an ASR image using a strictly network-based solution. How do you accomplish this?

- A. Start up the computers from a non-diskless NetBoot image, then use ASR multicast to restore the volumes.
- B. Start up the computers from the ASR image using NetBoot services, then select Restore Target Volume when prompted.

- 
- C. Start up the computers from the target volumes, then use the command-line utility asr to restore the target volumes from the ASR multicast image.
  - D. Start up the computers from a diskless NetBoot image, then use ASR multicast to restore the volumes.

**Answer: D**

**QUESTION NO: 8**

How can you prevent a user from starting a computer from a DVD, CD-ROM, or FireWire drive?

- A. Format your designated startup disk without Mac OS 9 drivers.
- B. Explicitly select a startup disk in System Preferences.
- C. Enable the open firmware password on the computer.
- D. Set up Classic to use a System Folder on a disk image.

**Answer: C**

**QUESTION NO: 9**

The software contained in a software package can be installed by \_\_\_\_\_ or by \_\_\_\_\_.  
(Choose TWO.)

- A. using the following syntax on the command line: `installer -pkg <package_name> -target <target_volume>`
- B. double-clicking on the package to open it in the Installer application
- C. expanding the package and dragging the contents to the applications folder
- D. opening the package contents and dragging the contents to / (root of the volume)
- E. expanding the package and running the installer contained inside

**Answer: A,B**

**QUESTION NO: 10**

The command-line utility asr can scan \_\_\_\_\_.

- A. read-only or compressed .dmg files
- B. read/write and read-only .dmg files
- C. uncompressed .cdr.img files
- D. info.plist files on .dmg files
