Topic 1, Volume 1

QUESTION NO: 1

LDAPSYNC is an IBM Maximo Asset Management V7.5 cron task that can be used for what purpose?

- A. To synchronize users from a LDAP capable server, using the J2EE server security repository
- B. To synchronize users from a LDAP capable server, bypassing the J2EE server security repository
- C. To synchronize users from a LDAP capable server, using the application server security configuration
- D. To synchronize users from a LDAP capable server, bypassing the J2EE bind repository authentication

Answer: B

Explanation:

QUESTION NO: 2

Which statement describes how garbage collection is used?

- A. Garbage collection frees memory by removing dead objects from the heap.
- B. Garbage collection compresses the heap space through data compression.
- C. Garbage collection forces the freeing of memory in the heap by dumping the objects in the order of least used to most used.
- D. Garbage collection uses a properly tuned garbage collection agent to gather unused data in the heap and purge it from the system.

Answer: A

Explanation:

QUESTION NO: 3

When reviewing customer requirements for an IBM Maximo Asset Management environment, the customer explains that they have no plans for a development or a user acceptance testing environment. What is a reason that should be given to the customer as to why they should have a development environment?

- A. Development environments always differ from production environments in the number of JVMs.
- B. Development environments typically utilize the same database server and J2EE servers as in

the production environments.

C. Development environments allow for the creation, configuration, and development of test code without compromising the integrity of the production system.

D. Development environments must utilize the IBM Maximo Integration Framework components to export and import code and configuration changes into the production environments.

Answer: C

Explanation:

QUESTION NO: 4

How can IBM Maximo Asset Management user login performance be improved?

A. set the default Start Center to one with minimal portlets

B. minimize the number of Start Centers presented as tabs to a user at login

C. ensure users have their own database user account used by reporting processes

D. increase the number of roles per user to maximize the number of Start Center tabs presented at login

Answer: A

Explanation:

QUESTION NO: 5

When should IBM Maximo Asset Management load testing be performed?

A. during the implementation phase to expose performance problems

B. during the design phase to ensure hardware is correctly sized for procurement

C. during the go live phase to ensure the system is running per client requirements

D. during the post-implementation phase to ensure satisfactory system performance level with active users

Answer: A

Explanation:

QUESTION NO: 6

The IBM Maximo Asset Management V7.5 administrator completes the configuration of the Maximo Integration Framework and runs an export from the EXTSYS1 external system. The

export appears to complete without error, but when the mx.e.int.globaldir is checked there is no export. The administrator checks the J2EE JMS sequential outbound queue and can see that the message is there, but it is not being processed. What is the most likely cause the message is not getting delivered to the mx.e.int.globaldir?

- A. The EXTSYS1 external system is not active.
- B. The Maximo Java Virtual Machine is not started.
- C. The JMSQSEQCONSUMER.SEQQIN cron is not active.
- D. The JMSQSEQCONSUMER.SEQQOUT cron is not active.

Answer: D

Explanation:

QUESTION NO: 7

What are the licensing implications of using the IBM Maximo Asset Management (Maximo) supplied middleware?

- A. The customer is free to use the middleware however they choose.
- B. The customer is licensed to use the middleware only for the Maximo implementation.
- C. The customer must contact IBM and discuss licensing for the proposed environment.
- D. The customer is licensed to use the middleware as long as it is all installed on a single server.

Answer: B

Explanation:

QUESTION NO: 8

Which system property is used to log SQL statement execution time?

- A. mx.e.db.SQLRunTime
- B. mx.e.db.fetchResultTime
- C. mx.e.db.logSQLTimeLimit
- D. mx.e.db.fetchResultLogLimit

Answer: C

Explanation:
