EMC Technology Foundations-Backup and Recovery

DEMO

QUESTION NO: 1

DataMover recovery after failover is always performed by which process?

A. Manual
B. DataMover failover is not supported
C. Recovery is not needed until another failure occurs
D. Automatic

Answer: A

QUESTION NO: 2

Which statement about Celerra SRDF is correct?

A. Is a CLARiiON only solution
B. Is implemented over a campus distance
C. Is an asynchronous solution
D. Is only bi-directional

Answer: B

QUESTION NO: 3

Which CLARiiON-layered software is supported in Replication Manager/SE?

A. SnapView and MirrorView
B. SnapView and SAN Copy
C. SnapView, SAN Copy and MirrorView
D. SnapView only

Answer: B

QUESTION NO: 4

A Windows client must perform which operation to access a NAS advertised connection point?

A. Map
B. Export
C. NFSMount
D. Share

Answer: A

QUESTION NO: 5

What is a benefit of Replication Manager?

A. Automates the failover of applications by coordinating operations between servers and disk arrays
B. Automates MirrorView local array-based backup and recovery operations
C. Facilitates offline processing through the ability to mount replicas on alternate hosts
D. Manages MirrorView array-to-array replication

Answer: C

QUESTION NO: 6

You want to be able to recover individual files in case of accidental erasure. Which type of backup best fits this need?

A. Operational
B. Disaster Restart
C. Archive
D. Disaster recovery

Answer: A

QUESTION NO: 7

Which CLARiiON-layered software is supported in Replication Manager/SE?

A. SnapView only
B. SnapView and SAN Copy
C. SnapView, SAN Copy and MirrorView
D. SnapView and MirrorView

Answer: B

QUESTION NO: 8

What is a benefit of Replication Manager?

A. Facilitates offline processing through the ability to mount replicas on alternate hosts

B. Manages MirrorView array-to-array replication

C. Automates MirrorView local array-based backup and recovery operations

D. Automates the failover of applications by coordinating operations between servers and disk arrays

Answer: A

QUESTION NO: 9

Which NetWorker resource is used to determine the backup level for a client?

A. Schedule

B. Group

C. Client

D. Pool

Answer: A

QUESTION NO: 10

What does NetWorker use to interface with a third-party application during a recovery?

A. The standard NetWorker recovery command on the Server

B. The value of the "Recovery Interface" attribute

C. The standard NetWorker recovery command on the Client

D. A module-specific recovery command on the Client

Answer: D

QUESTION NO: 11

A user asks to have a corrupted file restored. Which type of backup satisfies this request?

A. Regulatory

B. Operational

C. Archival

D. Disaster Recovery

Answer: B
