QUESTION NO: 1

An administrator wants to back up an EMC Celerra with Avamar using a single NDMP accelerator node. Based on EMC best practices, what is the maximum number of files that can be backed up per backup job?

- A. 5 million
- B. 10 million
- C. 15 million
- D. 20 million

Answer: B

Explanation:

QUESTION NO: 2

Which EMC NetWorker feature is used to perform a backup based on an event?

- A. Application modules
- B. Directives
- C. Scheduled backups
- D. Probe-based backups

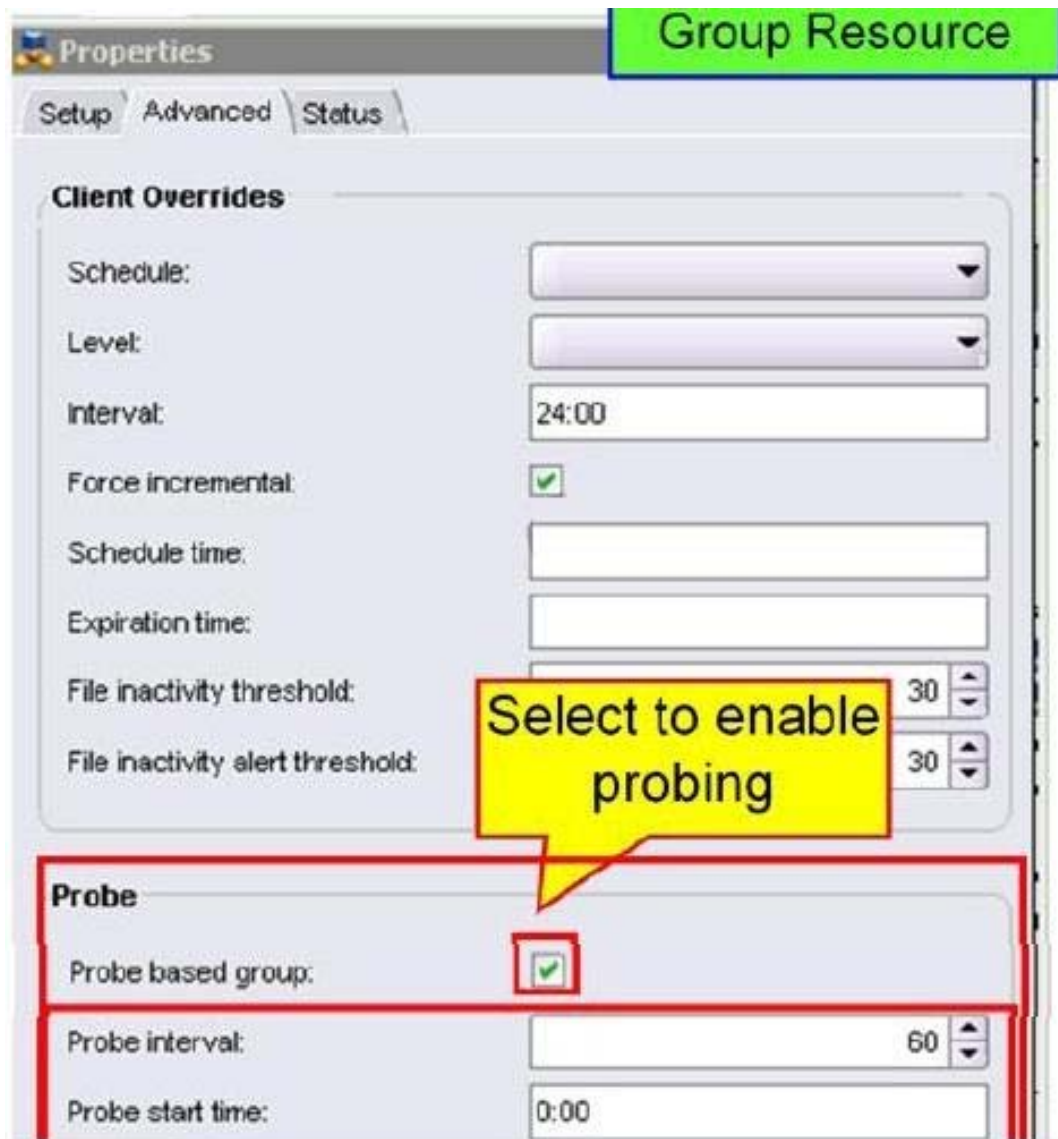

Answer: D

Explanation:

Probe-based Group Backups

- Event-driven backups
- Backup of the group is performed based on the result of executing user-created client *probes*
- A *probe* is a user-created program/script configured to run on clients in a probe-enabled group
 - The success (exit 0) of the probe triggers the backup
 - **Probe Interval** determines how often probing occurs (minutes)
 - **Probe Start** and **End** times define the probing window when client probing occurs
