**QUESTION NO: 1**

When you mount a FlexClone of a VMFS datastore on your ESX server, which two conditions are true? (Choose two.)

- A. The virtual machines in the FlexClone are automatically registered.
- B. The FlexClone datastore has the same size as the original.
- C. The FlexClone datastore has the same name as the original.
- D. The FlexClone datastore has a different name than the original.

**Answer: B,D**

**QUESTION NO: 2**

VMware allows for the oversubscription of physical memory to virtual machines. What impact does this configuration have on storage?

- A. Memory oversubscription has no impact on storage.
- B. Oversubscription impacts the storage in the ESX server's swap partition. By default this design requires a swap partition which is twice as large as the amount of physical memory.
- C. Oversubscription requires a dedicated swap partition on shared storage.
- D. Oversubscription is managed as a virtual swap file that exists for each virtual machine and is equal to the size of memory allocated to that virtual machine.

**Answer: D**

**QUESTION NO: 3**

Which single ONTAP volumes would realize the greatest storage savings from deduplication?

- A. One that contains two VMFS datastores consisting of four virtual machines, each having different applications loaded
- B. One that contains a single VMFS datastore consisting of eight virtual machines that have local transaction logs that roll over frequently
- C. One that contains two VMFS datastores consisting of four virtual machines that have a single application that supports the entire environment
- D. One that contains a single VMFS datastore consisting of eight virtual machines that require different patch sets that change frequently

**Answer: C**

---

**QUESTION NO: 4**

What is a valid LUN type for a LUN used as a virtual RDM for an NTFS file system?

- A. VMware
- B. Basic
- C. Dynamic
- D. Windows

**Answer: D**

**QUESTION NO: 5**

Which statement is true about NetApp support for an environment consisting of SnapDrive 5.0 and the ESX 3.0x server operating system?

- A. SnapDrive for Windows is not supported with FCP or iSCSI connections to NetApp storage from the ESX server host operating system.
- B. SnapDrive for Windows is supported with iSCSI connections to NetApp storage from the ESX server host operating system
- C. SnapDrive for Windows is supported with non-HBA iSCSI connections to NetApp storage from the ESX server host operating system.
- D. SnapDrive for Windows is supported with FCP connections to NetApp storage from the ESX server host operating system.

**Answer: A**

**QUESTION NO: 6**

When should Sysprep be run on a virtual machine when using NetApp cloning tools?

- A. As the last step of creating the gold image or master copy of the virtual machine
- B. On the clone after creating the new virtual machine
- C. As part of the VMware guest customization wizard
- D. Before installing the guest operating system

**Answer: A**

**QUESTION NO: 7**

A corporation wants to minimize individual virtual machine disk file Recovery Time Objectives

---

(RTOs) and utilize as few steps as possible during the recovery process. Which solution meets these requirements?

- A. FCP with Single FileSnapRestore
- B. NFS with Single FileSnapRestore
- C. FlexClone
- D. LUN Clone

**Answer: B**

#### **QUESTION NO: 8**

What are two advantages of using NetApp Snapshot copies to back up virtual machines and datastores? (Choose two.)

- A. A backup client doesnot need to be installed on each virtual machine.
- B. ANetApp Snapshot copy is free and requires no extra storage.
- C. Backups are scheduled at thedatastore level and not for each virtual machine.
- D. NetApp Snapshot copies can be kept indefinitely without penalty.

**Answer: A,C**

#### **QUESTION NO: 9**

In which two situations is selling a SnapVault secondary license appropriate? (Choose two.)

- A. Customer wants to implement partner Open Systems SnapVault (OSSV) agents to provide application aware backup to disk.
- B. Customer must be able to restart critical virtual machines at secondary site with 1 hour Recovery Point Objective (RPO).
- C. Customer requires different retention schedules on primary and secondary storage.
- D. Customer needs to be able to resync back to the primary site after a disaster.

**Answer: A,C**

#### **QUESTION NO: 10**

Which two statements are true regarding VMware Snapshot copies? (Choose two.)
